CLEANING and MAINTENANCE

1) Soft soap should be used as common cleaning material. Make sure that rinsing water is frequently changed with fresh water.

2) Any unclean material spilled on Greton products should be removed immediately by means of using special quality grease and dirt solvents that are not harmful to the polish quality.

3) Floors where Greton products are installed should not be wiped with wet mops, but with rub machines. Otherwise dirt affected area will spread out to the rest of the surface

4) Before applying and synthetic polish or cleaning material on the surfaces of Greton products, Greton's approval should be taken or advice should be taken from the product managers of relevant company regarding the specific item to be used.

5) Henkel products can be used for cleaning and maintenance of Greton products, but please contact Henkel to ask the product to be used. If needed, please ask their demonstration as well.
